*Protect Your Roof
From Premature Deterioration
With A Green Machine Solar Powered*

Intake Booster Vent

Effective attic ventilation is critical for a long-lasting roof—yet most homes have insufficient attic ventilation!

A Solar Powered Intake Booster™ Vent will draw fresh, outside air into your attic, increasing the overall effectiveness of your existing soffit vents. Effective ventilation will help to:

- Remove excess heat and moisture to protect your roof from premature deterioration
- Safeguard your attic possessions against mildew damage
- Limit the growth of harmful mold
- Protect your roof from premature deterioration and roof rot
- Minimize peeling and extend the life of exterior and interior paint
- Guard against ice damming in harsh winter climates
- Possibly reduce excessive heating and air conditioning costs

MasterFlow® Green Machine™ Solar Powered Intake Booster™ Vents are a part of the GAF-Elk Smart Choice® Roof System Solution, and have even earned the prestigious Good Housekeeping Seal (see reverse).

One (or more) Intake Booster™ Vents draw supplemental fresh air into your attic. Hot, stale attic air is removed through your exhaust vents.
