Self-Adhering Premium Leak Barrier...

To protect against leaks, contractors typically nail one or two layers of "tar paper" to your roof before they install the tile. But "tar paper" doesn't provide much protection because it's made with conventional organic felt, which can become saturated with water and reduce its ability to prevent leaks. So even though you pay a large premium for a tile roof, your home—your most valuable asset—is potentially left vulnerable to water damage.

UnderRoofTM 2 waterproof protection is a specially-designed self-adhering leak barrier for tile roofs. It provides maximum protection from leaks that can result from tile saturation, clogged gutters, wind-driven rain, or (in cold climates) freeze-thaw damage. Made with flexible SBS-modified compound and reinforced with a fiberglass-reinforced polyester core, UnderRoofTM 2 waterproof protection applies easily and can be left exposed for up to 180 days, if necessary. The heat-activated adhesive allows the product to be repositionable for ease of installation, but seals tightly once in place providing a watertight barrier against leaks.

The GAF-Elk Smart Choice[®] Roofing System Solution (which includes UnderRoofTM 2 waterproof protection) has earned the prestigious Good Housekeeping Seal, which means that Good Housekeeping stands behind the products in this system. (Refer to Good Housekeeping Magazine for its consumer protection policy.)
